

Technical Information

Architecture

The Express Suite is built on Rosetta's highly-acclaimed System 6 platform. The underlying data format is XML and the platform is Microsoft Windows 2000, SQL2000, IIS5.

Rosetta System 6 has an "n-tier" architecture and a generic suite of COM+ components which are both scaleable and proven. It is a complete booking, publishing and matching system for internet classifieds.

The Express Suite components have been rigorously tested for quality and speed, and are also proven on load-balanced web farms and clustered database servers.

Hardware

The Express Suite runs on the Microsoft Windows 2000 Server platform. The number and configuration of web and database servers depend on such variables as site traffic, number of sites sharing the database, and other network configuration considerations. Rosetta Professional Services will assist you in determining the best configuration.

Maintenance

Rosetta provides a full maintenance service for all its software components which includes minor releases and fixing of defects.

Installation/deployment

Rosetta's Professional Services team offers installation, training, technical assistance and deployment assistance according to your requirements. Your Account Manager will help you to select the services you require, and agree a Project Plan with you.
